

HARISH KUMAR D

Full Stack AI Engineer

Chennai, India | harishkumardhanasekaran3@gmail.com | +91-9442519004 | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

AI Agentic Developer and Full Stack Engineer with hands-on experience building production-grade web applications, robust REST APIs, and autonomous AI pipelines. Skilled in scaling backend systems (FastAPI, Django, Spring Boot) and orchestrating LLM workflows (LangChain, LangGraph). Proven track record of architecting full-stack platforms from idea to production using Docker, PostgreSQL, and cloud infrastructure. Passionate about turning complex ideas into scalable products and bridging the gap between raw AI capabilities and enterprise automation.

TECHNICAL SKILLS

AI & Agentic Systems: LangChain, LangGraph, Retrieval-Augmented Generation (RAG), Llama-3, Prompt Engineering, Vector Databases, Vectorless DB, LLM Gateways, LLM Evals

Backend Development: Python, FastAPI, Django, Spring Boot, REST APIs, SMTP, IMAP

Frontend Development: React.js, Svelte 5, Flutter

Databases: PostgreSQL, MySQL, MongoDB, Supabase, Firebase

Cloud & DevOps: Docker, Kubernetes, Jenkins, AWS, Hostinger VPS, GitHub Actions

Tools & Integrations: Razorpay API, FCM (Firebase Cloud Messaging), Cursor, Git, Postman

PROFESSIONAL EXPERIENCE

Full Stack Developer | *Cloudrule Technology Private Limited* March 2026 – Present

- Architected and deployed the production-grade RoyalFishShop ecosystem (Admin and User mobile applications) handling end-to-end e-commerce workflows using Flutter, Django, and MySQL.
- Engineered a scalable backend infrastructure deployed on Hostinger VPS, integrating the Razorpay API for payments and Firebase Cloud Messaging (FCM) for real-time transaction alerts.
- Optimized frontend architecture using Flutter with Provider state management and streamlined REST API integrations, improving application stability and UI response times.
- Led the complete release cycle from local development to Google Play Store deployment, performing comprehensive unit testing to resolve API bottlenecks and ensure high application stability.

Full Stack Developer Intern | *Techpuram Technology Private Limited* Nov 2024 – Feb 2025

- Built a highly responsive Customer Relationship Management (CRM) web application, combining a robust Spring Boot backend with a modern Svelte 5 frontend architecture.
- Engineered secure email integration pipelines using SMTP and IMAP protocols, enabling automated client communication campaigns and real-time inbox synchronization within the CRM dashboard.
- Designed scalable PostgreSQL database schemas for complex CRUD operations, optimizing data retrieval for core modules like customer profiles and lead-tracking activity logs.

FEATURED PROJECTS

AI ESG Pipeline – Enterprise Policy Assistant & Data Validator | May 2026 – Jul 2026 | [GitHub](#)

React.js, Tailwind CSS, Python, FastAPI, LangGraph, LangChain, Llama-3, VectorDB, Supabase

- Engineered a multi-agent LangGraph pipeline: designed a state-machine workflow orchestrating three specialized AI agents (Extractor, Validator, Anomaly Detector) to process, validate, and analyze uploaded ESG reports (PDF/Excel).
- Built a high-speed local RAG chatbot using a hybrid Vector and Vectorless DB search architecture, eliminating API latency and LLM hallucination while accurately retrieving policy data.
- Developed a highly concurrent, non-blocking REST API in FastAPI to seamlessly handle simultaneous chatbot queries and heavy document processing tasks.

TravelBuddy AI – Autonomous Travel Planning Agent | Feb 2026 – Mar 2026 | [GitHub](#)

React.js, Python, FastAPI, LangGraph, LLMs

- Built an autonomous multi-agent AI travel assistant using LangGraph and FastAPI that researches destinations, retrieves dynamic data, and generates personalized itineraries.
- Implemented advanced prompt engineering strategies to force the LLM to return strictly structured JSON data, eliminating client-side parsing errors.
- Architected a low-latency React.js frontend integrated with a non-blocking FastAPI backend for seamless UI-to-AI-engine communication.

Smart Service Booking Platform (User, Worker & Admin Ecosystem) | Dec 2025 – Jan 2026 | [GitHub](#)

React.js, FastAPI, PostgreSQL, JWT

- Developed a comprehensive 3-part full-stack ecosystem (User App, Worker App, and Admin Website) for matching local professionals with customers, driving the end-to-end technical architecture.
- Implemented secure JWT-based authentication and strict role-based access control (RBAC) pipelines to safely partition operations across the three distinct client portals.
- Architected optimized RESTful APIs via FastAPI and integrated a PostgreSQL database, ensuring low-latency data synchronization and high scalability across the entire ecosystem.

EDUCATION

B.E. in Computer Science and Design 2022 – 2026

Sethu Institute of Technology, Tamil Nadu

ACHIEVEMENTS & HIGHLIGHTS

- College Level Finalist – Smart India Hackathon 2023 & 2024, national-level innovation contest, for projects Park Ease (smart parking management system) and Plant Dr (AI-based plant disease detection app).
- Winner (2nd Prize) – Project Expo, organized by Kamaraj College of Engineering & Technology, recognized for technical innovation and practical impact of the presented project.
